

Kerecis presents

Clinical Courier

In This Issue

The Number to Know · The Healing Edit · What’s Coming Up

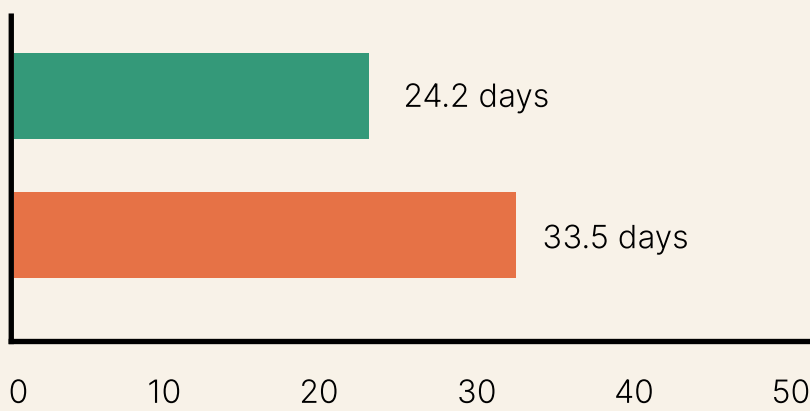

Welcome to this week’s Clinical Courier. A quick housekeeping note before we begin: we’re reintroducing our newsletter bigger and better ways. For those who are new, the Clinical Courier brings together the most important clinical, coverage, and objection-handling updates in one place each week We welcome your feedback, reply to directly to share your thoughts.

— The MSKA Team

Number of the week

9.3 Days

A 465-patient registry analysis found a shorter average length of stay for patients treated with intact fish-skin grafts.

The Healing Edit

Worth Memorizing

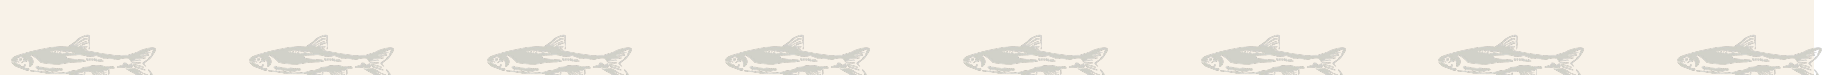

Presented this spring at the American Burn Association Annual Meeting, the study found that patients treated with intact fish-skin grafts were discharged after an average of 24.2 days, compared with 33.5 days for patients treated with reconstituted collagen or synthetic polyurethane products.

That difference remained statistically significant even after adjusting for age, burn severity, and inhalation injury.

And the shorter hospital stay did not come at the expense of safety. Graft loss was lower with intact fish skin—3.2% compared with 8.3%—while rates of sepsis, blood clots, and pressure injuries also trended downward.

A broader sensitivity analysis involving 687 patients reinforced the same overall pattern, with an even greater difference between the treatment groups.

Around the Company

Two smaller stories worth knowing

40 million covered lives

New payer policies and state Medicaid additions this quarter make Kerecis one of the two widest-covered skin substitutes for DFU. Check your territory tracker for plan-level detail.

Fish-Skin Shortens Stays

The trial compared hospital stay duration of severely burned patients treated with intact fish-skin grafts and patients treated with products that do not replicate the structure of native human tissue and are made from reconstituted cross-linked collagen and synthetic polyurethane.

On the Calender

Where the department will be through September

July 31	Surgical APP Wound Care Summit	Nashville, TN
Aug 14	MSKA Annual Meeting	Nashville, TN
